“THE METRIOS PRODUCT WAS A GODSEND TO US.”

THE EXPERIENCE OF PAIR EYEWEAR.

Scott Craycraft, the Director of Quality at [Pair Eyewear](#), tells us about the company production processes and its goals:

“Here in Irvine, we make eyewear and tops and it's all about making a very dull medical device, something exciting and interesting and unique every day, so that you can have the choice to wear whatever you want.

Our objective here is to produce as many as 4000 pairs every single day and that requires us to have automation and storage that is world class. To achieve successful on shoring of eyewear and manufacturing automation is critical. Fast, rapid, movement through the processes is extremely important. By using conveyor systems, intelligent automation, we're able to get 300 frames per hour through our systems up to 4000 frames a day in this 14,000 square foot production facility.”

[WATCH THE VIDEO](#)

“The Metrios product was a godsend to us because it allowed us to very basically reduce the amount of time it took to measure an individual part when we're doing incoming inspection by at least 90%.”

“One of the things that is great about the Metrios is that the user interface makes it real intuitive, it's simple to operate, it's very easy to program, and it yields precise results, which is critical.

I want to stress that leveraging our supplier relationships, working with key manufacturers and using automation efficiency, it gives us the ability to truly make eyewear that kids and adults really want to wear.”

Discover Metrios optical measuring machines

Automation in measurement is critical and Metrios represents the best solution to increase the production efficiency of companies.

“We have a complete optical lab with surfacing and edging and hard coating and thin film coating. So no manufacturing process would be complete without some element of the human interaction to get the customer exactly what they need.

Each of the items is custom fit, so when the lenses go in, everything is adjusted to make sure that the fit is perfect and finishes out our platform. So tight tolerances are extremely important to us. We have 750,000 tops that are coming through this facility currently and that will grow to over 2,000,000 when we're at full production.

And so automation in measurement is critical to just being efficient and being good stewards of the resources that we've been given.”

Ask for a demo and measure your parts with Metrios!

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
