NEW OMERA R1600 CNC MACHINING CENTER: AN ENGINEERING MASTERPIECE

Fig. OMERA R1600CNC machining centre

The new **[OMERA R1600 CNC machining centre](#)** exhibited at the 26th International Sheet Metal Working Technology Exhibition EUROBLECH 2022 (Hannover, Germany) is an innovative automatic machine equipped with 11 movements obtained with brushless motors.

There are many applications, from trimming to beading and/or flanging of complex geometric shapes such as round and polygonal panels.

It is therefore an interesting product that can be used in many sectors such as the production of polygonal panels of domestic and urban furniture, as well as in the production of road signs.

Thanks to the new numerical control and the implementation of new powerful CPUs and an innovative HMI, the centre becomes even more flexible and reliable.

The movements of the slide and the spindle are "synchronized" by the high-performance numerical control, which allows the operator a never seen flexibility in terms of production change.

The advantages are obvious in the case of large parts, where expansion dies would be too expensive.

Moreover, the use of brushless motors guarantees a clear reduction in energy requirements compared to traditional pneumatic or hydraulic drive systems."

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
