[VICIVISION Prima](#) | THE OPTICAL MEASURING MACHINE FOR ALL SHOPS

Do you produce turned parts? Discover the latest VICIVISION measuring system for turning process control.

[VICIVISION Prima](#) is the new optical measuring machine that clamps the part you need to measure just like a lathe would, with centers and a chuck.

The automatic measurement cycle starts by pressing a button: the measurement process takes from 30 to 60 seconds, and results are fast and objective because data is not conditioned by human error.

You can check your parts in the quality Lab or directly in the shopfloor, right next to the lathe.

In addition to this, you don't need specialized personnel, as the machine will guide you step by step in achieving your final result.

[WATCH THE FULL VIDEO](#)

Why choose Prima machine? Forget about wasting time and inaccurate results.

Choosing to buy an optical measuring machine for the first time can be complex, especially if you used to check your parts with traditional measurement instruments.

Discover some of the advantages that Prima can offer you:

- **Work more comfortably.**

You can have the loading point close to the operator, so the effort on his shoulders is lower. Moreover, you don't need to open or close any doors, and you are free to use both hands to load your part.

Thanks to the combination of fixed part and moving optics, you can always have precise results, even with the heaviest parts.

- **Save your time.**

Now it's time to stop wasting time. With VIVIAN, the virtual programming assistant, the learning time is reduced by 30%. You can also use the E-learning platform for staff training.

In any case, the online support is always ready to help you, especially for the most complex programs.

- **Choose a complete solution.**

VICIVISION Prima machine is an all-in-one solution. You can work directly on the real image of the part, and the measurement is simple and intuitive as on a profile projector.

Results are highly accurate and automatic, and this means that it is possible to easily measure from the simplest to the most complex features.

Finally, you can even program from your office with the free offline Prima software.

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
