ENCORE OF COLINES IN ALGERIA

COLINES continues its growth in the blown film extrusion market by supplying two state-of-the-art Polyblown lines to a market leader in flexible film production in Algeria. Both plants are equipped with three 3-layer extruders for a width of 3,200 mm.

"We are pleased to have chosen COLINES for this strategic supply for our company," explains the customer. "COLINES has proven to be a technologically advanced company, capable of designing and delivering extrusion lines with top-notch features. We can say that they have overcome our expectations and even the level of the lines we have already installed and operating in our production sites."

"From a technical standpoint, we must say that the innovative design of the extrusion die has allowed significantly reduced setup and die change times compared to what we are used to, even though the lines we already own are of a high standard. There has been excellent collaboration with the COLINES team both for the commissioning phase and for the tests, which ran smoothly."

The Polyblown 3-layer 3,200 mm is designed to produce a wide range of products. As a matter of fact, during testing, 8 different productions were successfully tested. The line can produce high-performance collation-shrink films and technical laminating films with an output of up to 800 kg/h, as well as highly specific products such as "pochette du lait" film, agricultural greenhouse film, and industrial (technical) packaging film. Furthermore, thanks to the new gusseting system developed by COLINES with precise positioning control through motors and adjustable via encoder, the line can produce stretch-hood and shrink-hood films.

In summary, extreme flexibility and high-level production quality are maintained, while adhering to the distinctive feature of Polyblown lines: extremely low electrical consumption.

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
