Need Buyer Credit Finance to buy machine?

We can help you!

please write to us – italianmachinery@indiaitaly.com

[VICIVISION X-Series](#) | **SMALL PART MEASUREMENT MADE EASY**

The VICIVISION X-series (X5, X10 and X360) are optical measuring machines specifically designed for micro-mechanical parts, dental implants, watch parts and micro-parts. These machines allow operators to easily inspect the components and obtain multiple measurements within seconds. The X series also provides rapid feedback in real-time, indicating whether the measurements are within tolerance or not. The X range is highly suitable for wide range of sectors including watch, dental, medical, and other micro-mechanical industries.

Measure the smallest details.

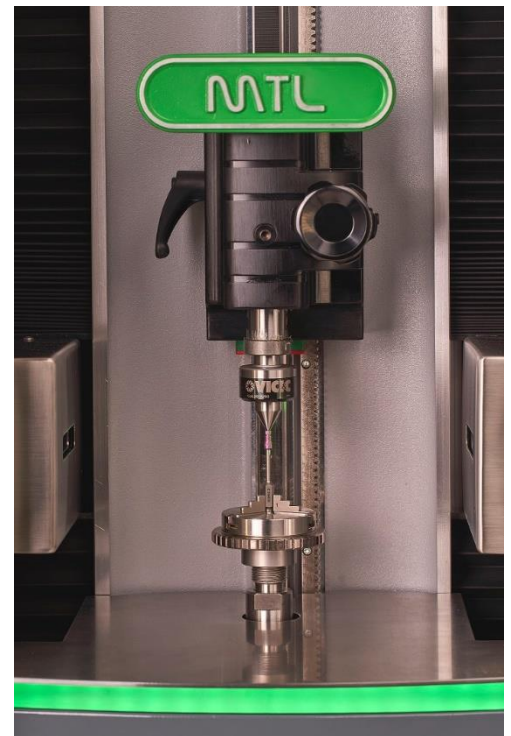

X series are specifically designed to make measurements on small parts. Thanks to its high resolution, the machine can detect even the smallest details and give you a complete measurement of the component, including coaxiality, cylindricity, axial and radial run-out, roundness and more.

Reliably fast and accurate.

With the help of VICIVISION X series, you can avoid the issue of unreliable manual measurement and enhance your production process with a fully automated, accurate and objective control system that takes only a few seconds to complete.

Handy and fall-proof.

The design of the machine allows for easy loading and unloading of parts, even when dealing with challenging or delicate parts. No openings or undercuts ensures that small parts can be easily retrieved if they fall during operation.

[Download X Series flyer](#)

Maximum efficiency in measuring extremely minute and complex elements.

The measurement process for small parts can be challenging, as it requires a high degree of precision and accuracy, especially in industries such as dental and medical where tight tolerances are required.

Now it's your turn to simplify your small part inspection process while still guaranteeing your part quality by using VICIVISION X series. Place the part into the machine and press "start".

Let the VICIVISION measurement process begin!

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and AMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:

Contact information of Piattaforma India desk:
